

Position sensor SRBS

FESTO

Characteristics

At a glance

The SRBS is used to detect the rotation of the shaft on rotary drives DRVS and DSM. Sensing is magnetic and contactless. Two binary switching points are output.

- The sensor can be quickly mounted without having to manually search for switching points
- Simple and reliable operation using just one button directly on the device
- No need for a connecting cable as there are 2 switching points in one device
- Freely programmable PNP/NPN and NO/NC reduces warehousing
- Robust, contactless and encapsulated position sensing with long service life

-----	------------

- 2 switching outputs 24 V
- Electronic teach-in of the switching points via buttons
- PNP/NPN programmable
- NO/NC programmable
- Sensing range > 270°
- Repetition accuracy <= 1°
